RIPPLER

 AI Powered - Code Impact Analysis Platform

SKILLS

PRIVATE CLOUD

Operating 32+ self-hosted services with observability

Docker • Nginx • CI/CD

LANGUAGES

Production-focused: Java, Python, TypeScript

Java • Python • TypeScript

JavaScript • C • C++ • HTML • CSS

FRAMEWORKS

Distributed systems, APIs, and web applications

Apache Kafka • ReactJS • Spring Boot
ShedLock • NextJS • Shell Scripting

TOOLS/PLATFORMS

GCP • OCI • Microsoft Flow

PostgreSQL • MySQL • Git • Jenkins

EDUCATION

DR. APJ ABDUL KALAM TECHNICAL UNIVERSITY

BTECH IN ELECTRONICS & COMMUNICATION

Sep 2020 | Lucknow, India

Babu Banarsi Das National Institute of Technology & Management

CGPA: 8.62 / 10.0

CENTRAL ACADEMY SCHOOLS

Grad. May 2015 | Lucknow, India

WORK EXPERIENCE

CITI | FULL STACK JAVA DEVELOPER (ASSISTANT MANAGER)

July 2022 – Present | Pune, Maharashtra, India

- Designed and developed **Rippler** , a distributed AI-powered PR impact analysis platform for microservice ecosystems, enabling real-time LLM-based code change evaluation and automated downstream dependency detection, reducing manual impact analysis effort and improving production risk visibility across services.
- Contributed to a core-stream within **Citi Commercial Banking (CCB)**, engineering a distributed integration layer that unified CRM, digital banking, authentication, and treasury systems to automate user onboarding, streamline cross-platform data flows, and improve end-to-end client experience.
- Architected high-performance cache layers using **Hazelcast distributed clusters**, reducing critical API response times to sub-10ms and improving failover resilience under peak loads.
- Implemented circuit-breaking, retry, and fault-tolerance mechanisms using **Resilience4j**, preventing cascading failures and improving system stability during production incidents.
- Engineered distributed scheduled job coordination using **ShedLock**, ensuring single-execution guarantees across horizontally scaled services.
- Spearheaded Trade Commercial E-loans integration initiatives, driving measurable digital adoption and streamlining customer onboarding workflows.
- Led VM-to-cloud migration efforts with auto-scaling and load-based billing optimizations, reducing infrastructure costs and improving deployment agility.
- Built and launched **UserManagement Pulse**, a full-stack internal product (React, Node, Java microservices), owning architecture, implementation, and CI/CD rollout to accelerate internal issue resolution workflows.
- Documented system architecture and operational playbooks using **Docusaurus**, improving debugging efficiency and cross-team self-service enablement.

CAPGEMINI | SENIOR SOFTWARE ENGINEER

Sep 2020 – Jun 2022 | Pune, Maharashtra, India

- Developed a scalable automated incident processor (**800 lines of TACL Tandem Advanced Command Language** used in DebitCard/Credit Card Txns) for **Discover Financial Services**,  **auto-closing 98% of incidents**, cutting dwell time to net zero. Full-stack contributions in ReactJS, Spring Boot, and PostgreSQL.

SUVASAA | REMOTE SOFTWARE ENGINEERING INTERN

May 2020 – Aug 2020 | Atlanta, GA, USA

- Built core e-commerce workflows using ReactJS and Firebase, integrated Stripe payments, and implemented role-based customer/admin routing for secure operations.

PERSONAL PROJECTS

PRIVATE CLOUD (32+ SERVICES) | DOCKER, NGINX, CI/CD, MONITORING

- Built a self-hosted engineering cloud with observability and service isolation, improving release control and reducing dependency on third-party hosted tooling.

RIPPLER | AI-POWERED PR IMPACT ANALYSIS PLATFORM

- Designed an LLM-assisted impact analysis workflow to detect downstream service risks from code changes and speed up review decisions for microservice teams.

FAANG-CRACKER | NEXT.JS, NODE.JS, WEBSOCKETS

- Building an interview-prep platform with real-time coding workflows and problem tracking inspired by competitive programming systems.
